

Sprint2 Review Documentation

Jodie Butterworth

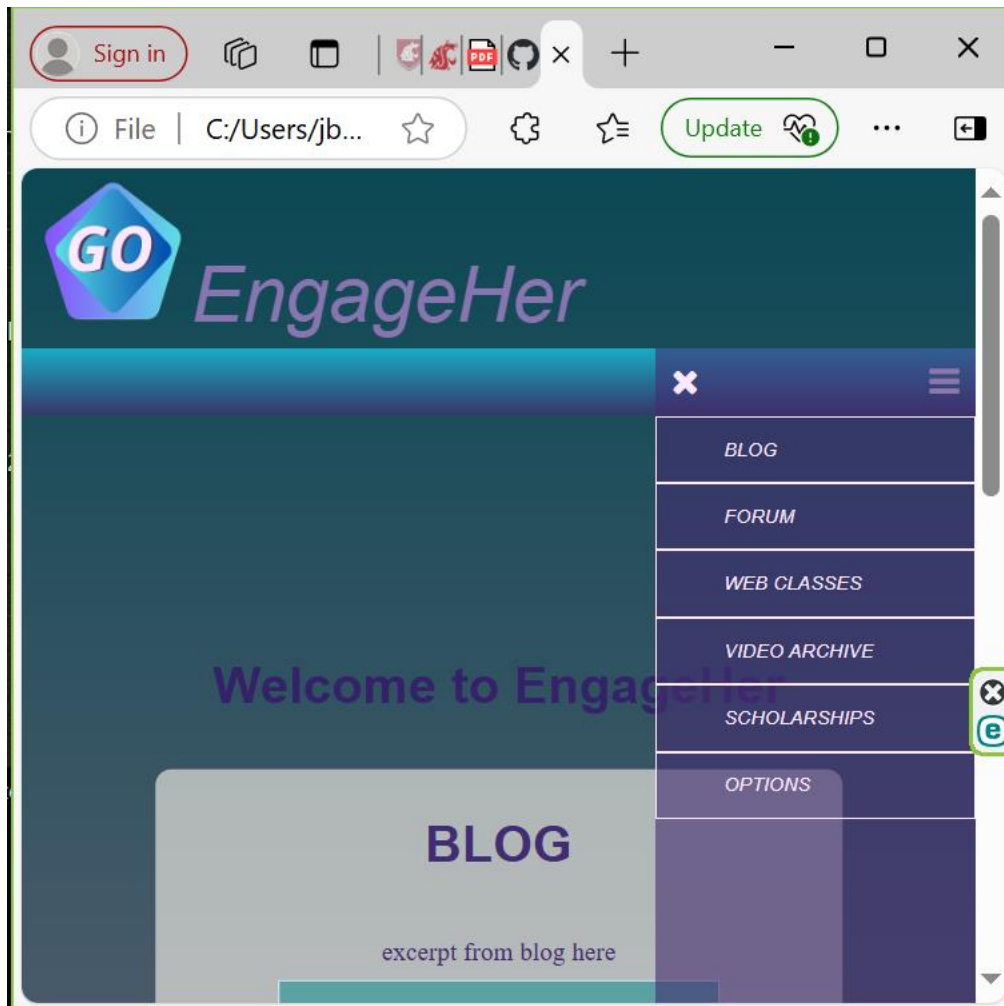

CPT_S 322 Project

Since there are no other members for the meeting, I made a review of the items completed.

F1 Homepage:

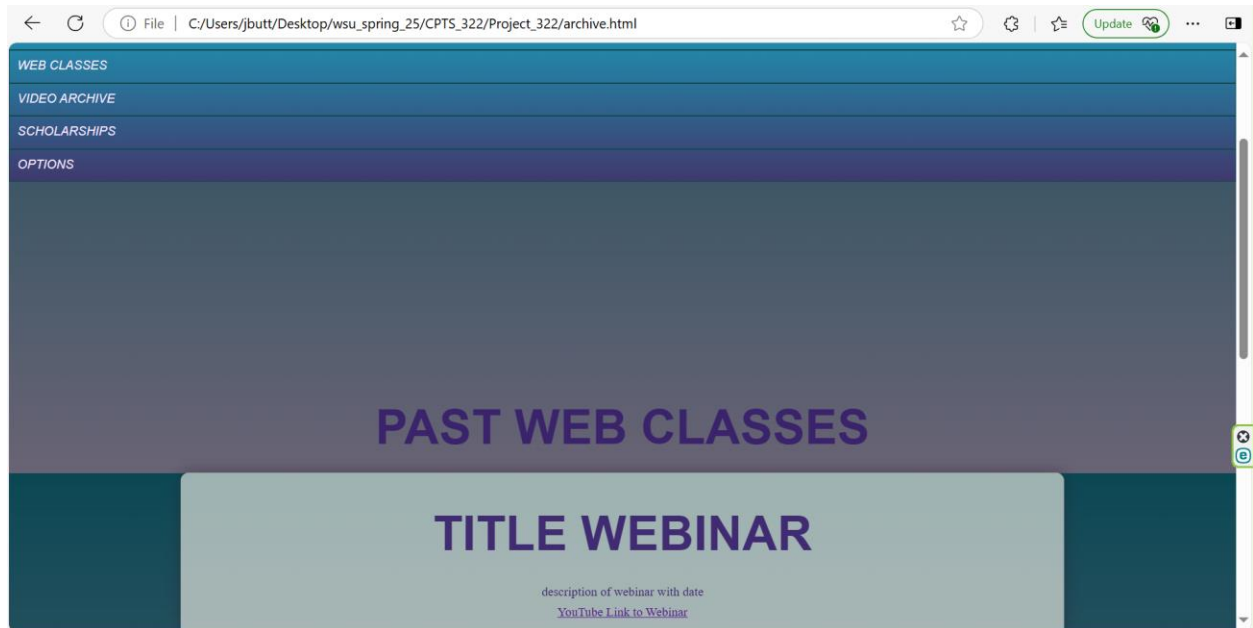

The desktop homepage has all the links to the other pages working. The logo and title at the top go back to the homepage from the other pages. I may change the menu design, and the background will probably change as well. I probably should get feedback from other people on the colors and layout.

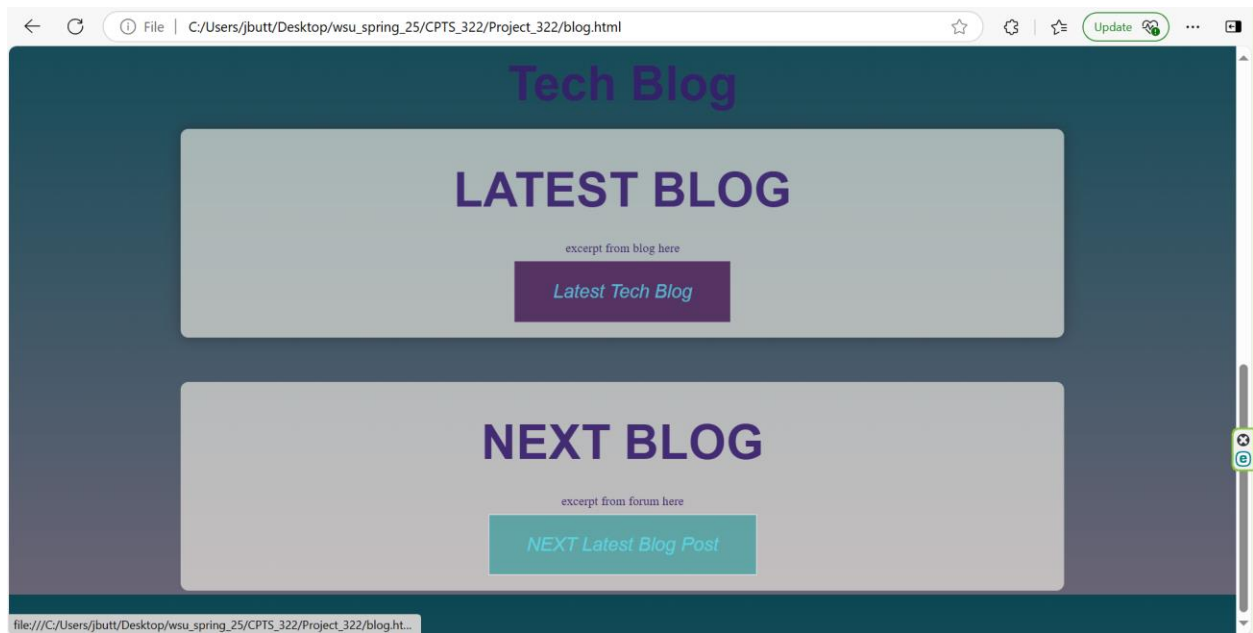

While the page does adjust for the window size and creates a drop down menu, the spacing of the main content is sometimes too far from the header. All links still work, and everything is still legible in smaller size windows.

I will briefly show the other major pages, but the issues they have are the same as the homepage. None of the outside links to other sites work, and the user profile page was never completed.

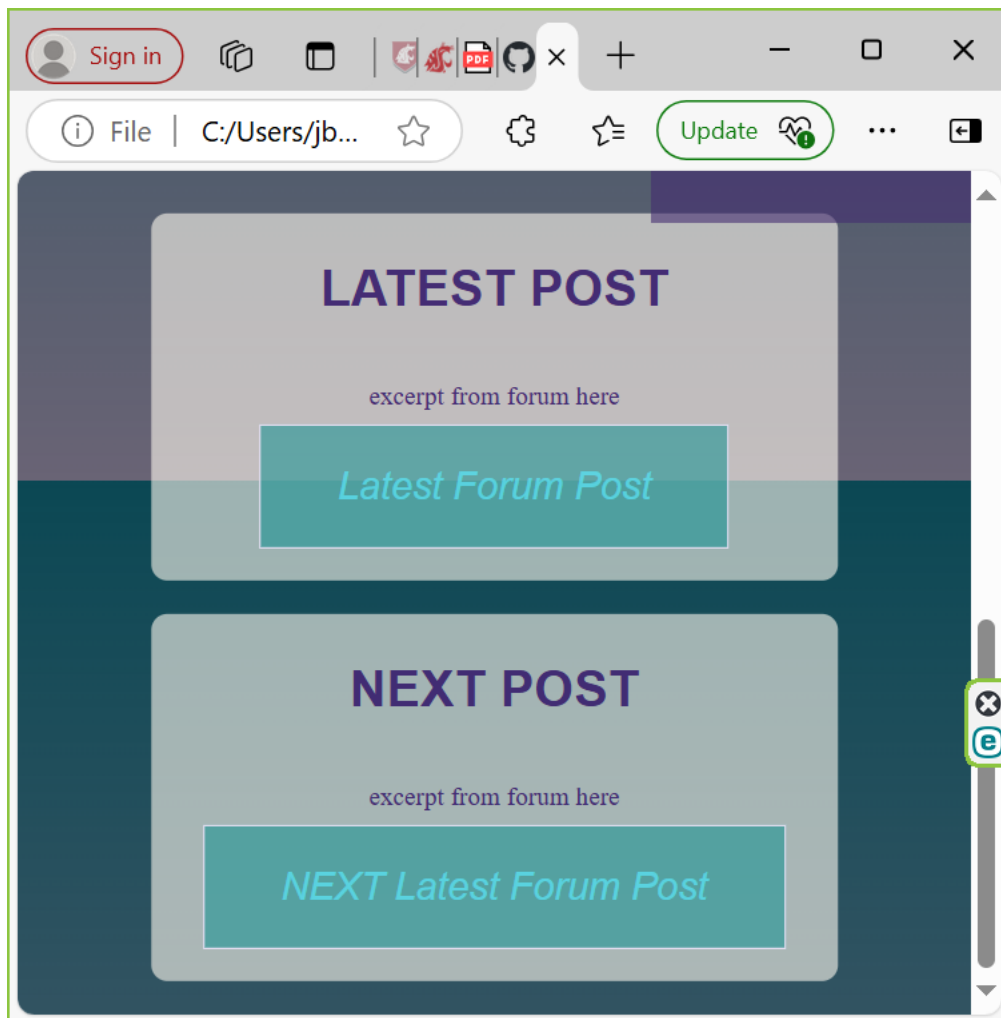

F2-F5: Major Pages for UI

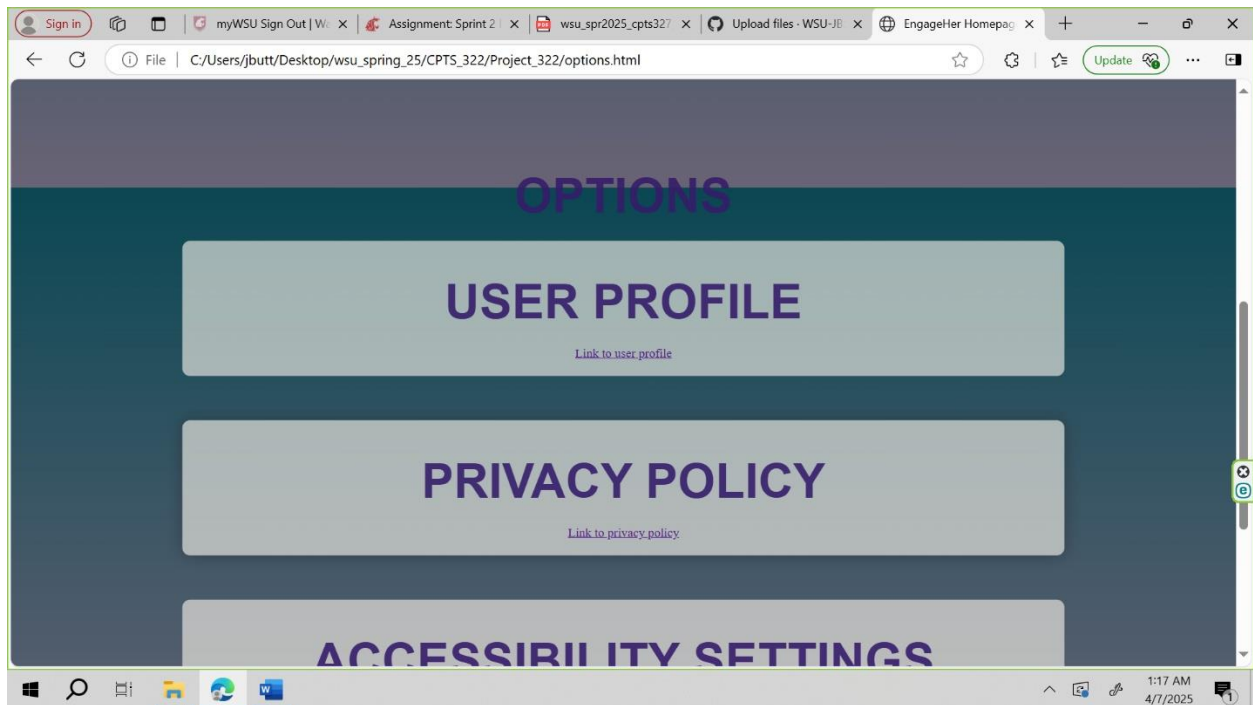

Old Video Links Page. The links to other pages work, but there are no YouTube links working.

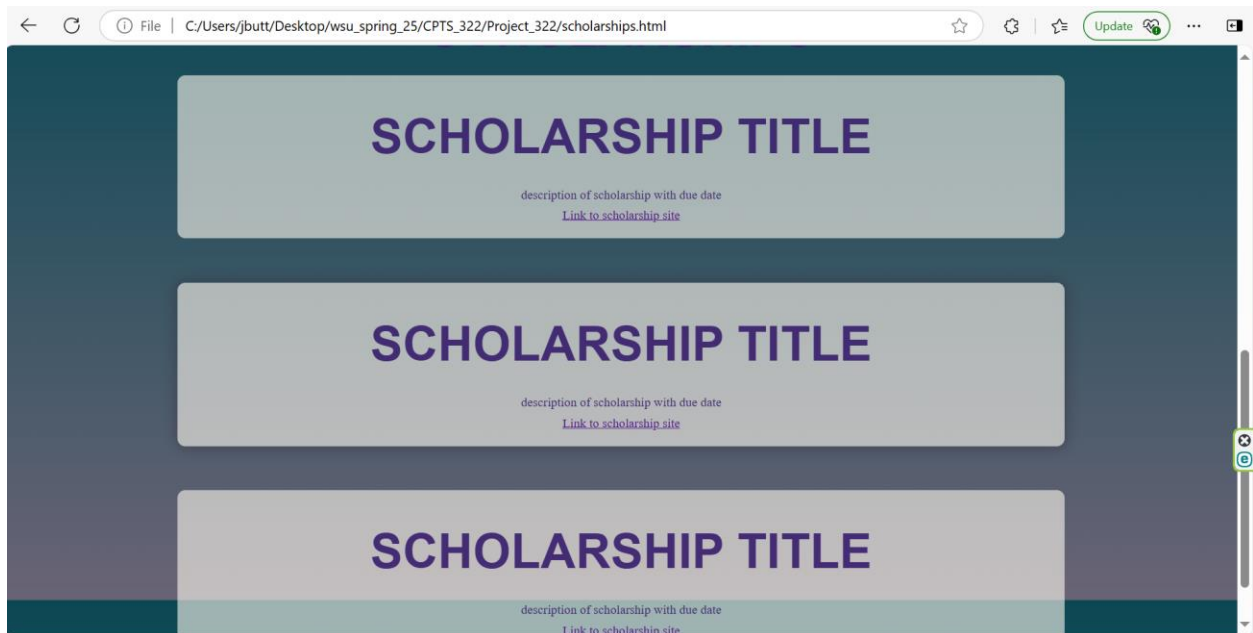

Blog page (Purple on the button is a hover effect)

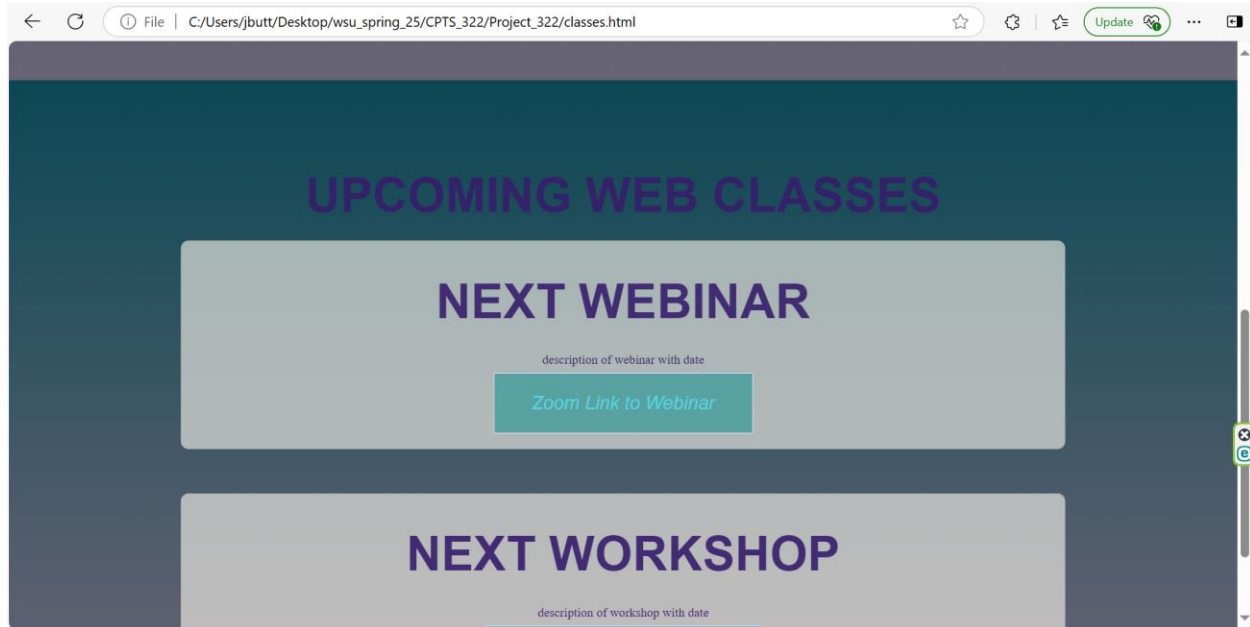

Forum Page in small window (the spacing places the forum post area well below the header)

The Options is presently its own page and not a drop down menu as originally designed. Still debating if this is an improvement or not.

Scholarship page. Links to other places in the site work, but no external links go to other sites.

Web Classes. Decided to put Workshops and Webinars on the same page because they are so similar. External links do not connect to Zoom yet.

I never got to creating the user database, so the Sprint 2 features are all front-end. The layout and UI still need editing, but I need to start focusing on the features that haven't been implemented at all yet.

Outcome of this review, I have a lot left to do and not that much time to do it in. I need to get the database working and fix the user profile and log in next. Security measures will need to be implemented at the same time.

Note: I do need to get some second opinions on this.
